Program 12. Use of Spinner widget in android application demonstration.

MainActivity.java

```
package com.example.a12spinnerwidget;
import android.os.Bundle;
import android.view.View;
import android.widget.AdapterView;
import android.widget.Spinner;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;
import android.widget.ArrayAdapter;
public class MainActivity extends AppCompatActivity {
// these are the global variables
Spinner classSpinner, divSpinner;
// string variable to store selected values
String selectedClass, selectedDiv;
@Override
protected void onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState);
setContentView(R.layout.activity main);
classSpinner = (Spinner) findViewById(R.id.classSpinner);
divSpinner = (Spinner) findViewById(R.id.divSpinner);
// Class Spinner implementing on Item Selected Listener
classSpinner.setOnItemSelectedListener(new
AdapterView.OnItemSelectedListener() {
public void onItemSelected(AdapterView<?> parent, View view,
int position, long id) {
String selectedClass =
parent.getItemAtPosition(position).toString();
switch (selectedClass) {
case "Class 1":
// assigning div item list defined in XMLto the div
Spinner
divSpinner.setAdapter(new
ArrayAdapter<String>(MainActivity.this,
android.R.layout.simple spinner dropdown item,
getResources().getStringArray(R.array.items_div_class 1)));
break;
case "Class 2":
divSpinner.setAdapter(new
ArrayAdapter<String>(MainActivity.this,
android.R.layout.simple spinner dropdown item,
getResources().getStringArray(R.array.items div class 2)));
break;
case "Class 3":
divSpinner.setAdapter(new
ArrayAdapter<String>(MainActivity.this,
android.R.layout.simple spinner dropdown item,
getResources().getStringArray(R.array.items div class 3)));
Toast.makeText(MainActivity.this, "\n Class: \t " +
selectedClass, Toast.LENGTH LONG).show();
break;
case "Class 4":
divSpinner.setAdapter(new
ArrayAdapter<String>(MainActivity.this,
android.R.layout.simple_spinner_dropdown_item,
getResources().getStringArray(R.array.items_div_class_4)));
Toast.makeText(MainActivity.this, "\n Class: \t
selectedClass, Toast.LENGTH LONG).show();
break;
```

```
//set divSpinner Visibility to Visible
divSpinner.setVisibility(View.VISIBLE);
public void onNothingSelected(AdapterView<?> parent) {
// can leave this empty
}
});
// Div Spinner implementing onItemSelectedListener
divSpinner.setOnItemSelectedListener(new
AdapterView.OnItemSelectedListener() {
@Override
public void onItemSelected(AdapterView<?> parent, View
view, int position, long id) {
selectedDiv =
parent.getItemAtPosition(position).toString();
// create a Toast to show the values on screen
Toast.makeText(MainActivity.this,
"\n Div: \t" + selectedDiv,
Toast.LENGTH LONG) .show();
@Override
public void onNothingSelected(AdapterView<?> parent) {
// can leave this empty
});
activity_main.xml
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"</pre>
xmlns:tools="http://schemas.android.com/tools"
android:layout width="match parent"
android:layout height="match parent"
tools:context="com.example.a12spinnerwidget.MainActivity">
<TextView
android:id="@+id/tvDemo"
android:layout width="match parent"
android:layout height="wrap content"
